County population estimates by age, sex and race: April 1, 1986

by
Stanley K. Smith
Population Program Director
and
Bashir Ahmed
Associate in Research

Bureau of Economic and Business Research
College of Business Administration
University of Florida

The estimates published in this bulletin were derived from a technique combining the housing-unit method for total population estimation with the cohort-component method for estimating the age-sex-race distribution of the total population. The estimates were based on 1980 census data, electric customer and building permit data between 1980 and 1986, survival rates in 1980, migration data between 1975 and 1980 and birth data between 1980 and 1986. The estimates refer only to permanent residents, thereby excluding all seasonal and parttime residents.

The basic methodology was as follows: 1980 census data were compiled for each county by age and sex for whites and nonwhites. Florida survival rates were applied separately to each age-sex-race group, indicating the proportion of the 1980 population expected to survive to April 1, 1986. The number of in- and out-migrants were estimated by applying migration rates to the 1980 populations of Florida (to estimate the number of out-migrants) and of the remainer of the United States (to estimate the number of in-migrants). These migration rates were based on gross migration patterns between 1975 and 1980.

Birth data from 1980-1986, collected by the Public Health Statistics Section of the Department of Health and Rehabilitative Services, were used to estimate the population aged 0-4. The birth, death and migration data were then combined to provide an estimate of the total population by age, sex and race. Special adjustments were made for counties with large group-quarter populations. The estimates of the age-sex-race components of the population were then adjusted to add to the 1986 estimates of total population published by the Bureau of Economic and Business Research.

The estimates published in this bulletin have been aggregated into broad age groups because of space limitations. Data for five-year age groups (0-4, 5-9, 10-14, . . . , 75-79, 80-84, 85+) are available from the Bureau at 221 Matherly Hall, University of Florida, Gainesville, Florida 32611.
